

Abstract

Ligterink, N.E., "*Functional System Dynamics*", University of Twente, p. X+271, ISBN 978-90-365-2538-1, 2007 (Supervised by van der Schaft, A.J., van Amerongen, J. and Breedveld, P.C.)

Functional system dynamics is the analysis, modelling, and simulation of continuous systems usually described by partial differential equations. From the infinite degrees of freedom of such systems only a finite number of relevant variables have to be chosen for a practical model description. The proper input and output of the system are an important part of the relevant variables.
